

	Point Plot		Big Table			Filters
	Map			Big Table		
I didn't know what to start with, but so I went with a general outline that included a map, graph, 2 tables, and a filter.						
	Profit vs Returns by Subcat?		Return Rate by Subcat	Return Rate by Month		Filters
	(Point Plot)		(Table)	(Bar Chart/Race)		
	Return Rate by State			Return Rate Shipping Mode & State		
	(Map of US)			(Table or Map?)		
This was my second draft, after refining what I was trying to present in my storyboards.						

	# Orders vs Returned Orders by Subcat?		Return Rate by Cat/Subcat	Return Rate (Table)	by Customer Segment	Filters Order Details	
				Return Rate by Month		Cstmr Hstry Item Details	
	(Point Plot)		(Table)	(Bar Chart/Race)			
	Return Rate by State		Return Rate Customer Segment & Cat/Subcat		Return Rate Shipping Mode & State		
	(Map of US)		(Table)		(Table)		
	This was my final draft. I realized I had to (and reasonably could) fit another multivariable analysis.						
	I also wanted to make sure the subcategories were organized by category, for less confusion.
